Adaptation proposes 14 normal workflows, start to end. J2 numbers them in the order they will run, so W-1 is the first on the map.

The logic

- Identity writes the charter. Adaptation plans with realization (factors, stages) and certainty (five gates, zone).
- The judge asks the same question of every workflow: can it make its output? Code sets the score. Pass line 0.80.
- Adaptation proposes all workflows in dependency order. J2 registers them as W-1, W-2, ... in that order.
- Each workflow has one output, an artifact (a .md, .json or part of index.html). Later workflows read it.
- The map shows a workflow when it is the next to run. Audit findings give birth to fix workflows.

Code changes needed?

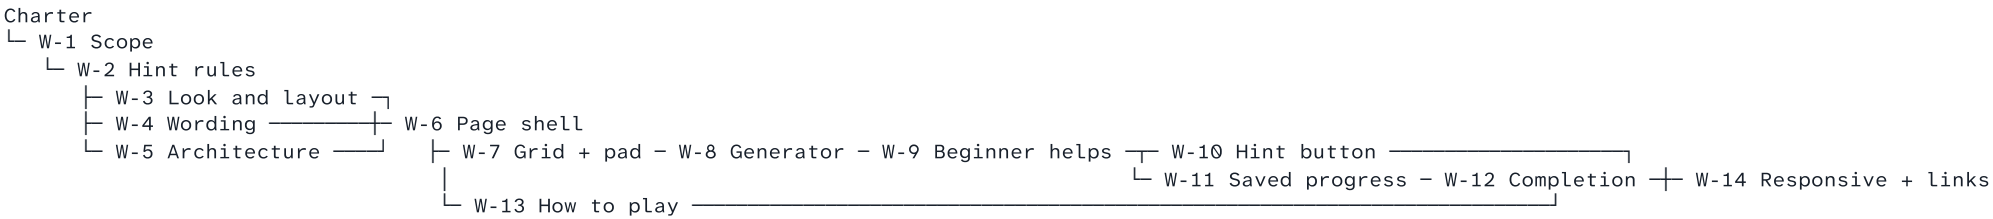

- **For this PDF: none.** It is a model of the run, built from last night's plan and timings.
- **For W-1 to be the first workflow on the map: none.** The validator gives ids in proposal order, and Coordination runs the lowest ready id first.
- **To run it for real: yes, one change in Adaptation.** Today, W-1 to W-5 are written in a separate step (decisions.md) and never become J2 workflows. That step must go, and all judged workflows must go to J2. No change is made yet.

Lanes are stages. Lines are direct dependencies; implied ones are left out (page 2 lists all).

The 14 workflows, their outputs and what each one reads

ID	WORKFLOW	STAGE	OUTPUT (ARTIFACT)	DIRECT DEPENDENCY	ALL INPUTS IT READS
W-1	Scope and return-visit features	Product	scope.md	charter	charter
W-2	Hint and help rules	Product	hint-rules.md	W-1	W-1
W-3	Look and layout	Design	style.json + layout.md	W-2	W-1, W-2
W-4	Encouraging wording	Design	wording.md	W-2	W-1, W-2
W-5	Single-file architecture and data model	Engineering	architecture.md	W-2	W-1, W-2
W-6	Page shell and warm look	Build	index.html: shell, styles (items 1, 5)	W-3, W-4, W-5	W-3, W-4, W-5
W-7	Playable grid and number pad	Build	index.html: grid, pad (item 2)	W-6	W-6, W-3, W-5
W-8	Puzzle generator and difficulty levels	Build	index.html: generator, levels (item 3)	W-7	W-7, W-1, W-5
W-9	Beginner helps	Build	index.html: notes, undo, highlight, check (part of item 4)	W-8	W-8, W-2, W-3, W-5
W-10	Hint button	Build	index.html: hint (item 4)	W-9	W-9, W-2, W-4, W-5
W-11	Saved progress and return counters	Build	index.html: resume, counters (item 6)	W-9	W-9, W-1, W-5
W-12	Completion celebration	Build	index.html: congratulation, new game (item 7)	W-11	W-11, W-8, W-4, W-3
W-13	How to play section	Build	index.html: how-to-play section	W-6	W-6, W-1, W-4, W-3
W-14	Responsive layout and in-page links	Build	index.html: fit 360/1280px, nav, links (item 8)	W-10, W-12, W-13	W-6, W-7, W-8, W-9, W-10, W-11, W-12, W-13

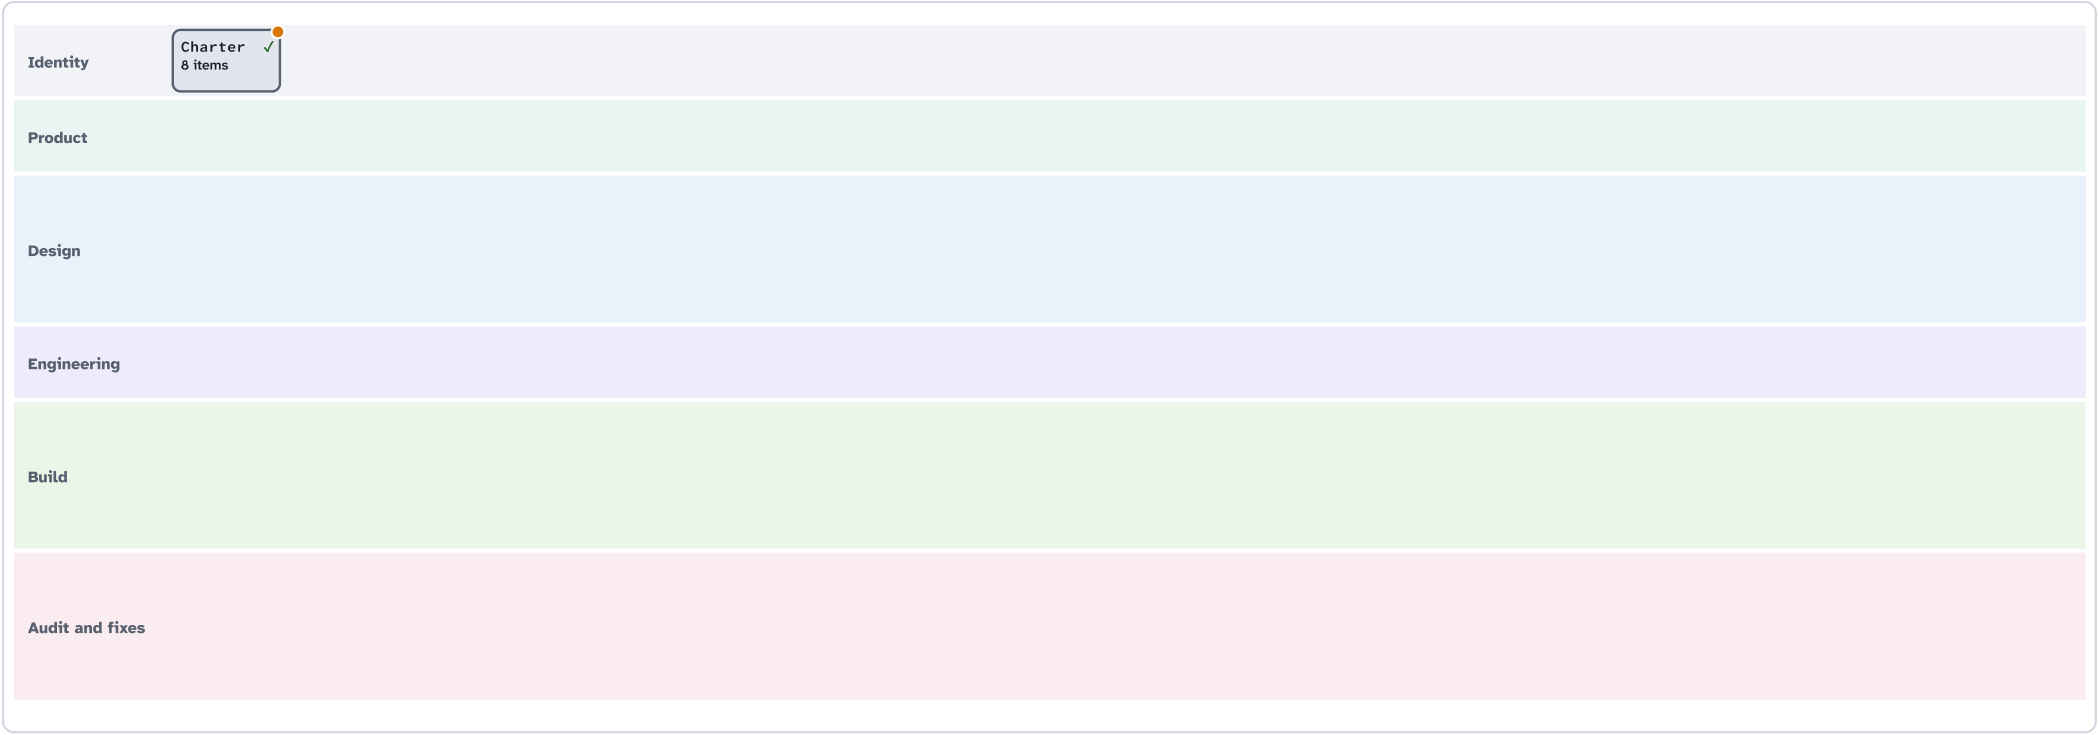

Tree, by direct dependency

Workflow names and dependencies come from the judged plan of run realization/j2-20261024-213253, renumbered in run order. A new run plans again, so names and count can change.

FRAME 1 OF 5 · MINUTE 0:00 TO 3:00 · MAP AT MINUTE 3:00

The charter is written. Adaptation starts to plan.

What happens in this window

0:00	The brief arrives. Identity writes the charter: 8 done-when items.
1:00	The validator accepts the charter. Adaptation starts realization: it lists factors (14: 8 brief, 5 general, 1 budget).
2:00–3:00	Adaptation groups the factors into 4 stages: product, design, engineering, build.

On the map now

1 done · 0 running · 0 next. Born in this window: Charter.

Registered, not on the map yet

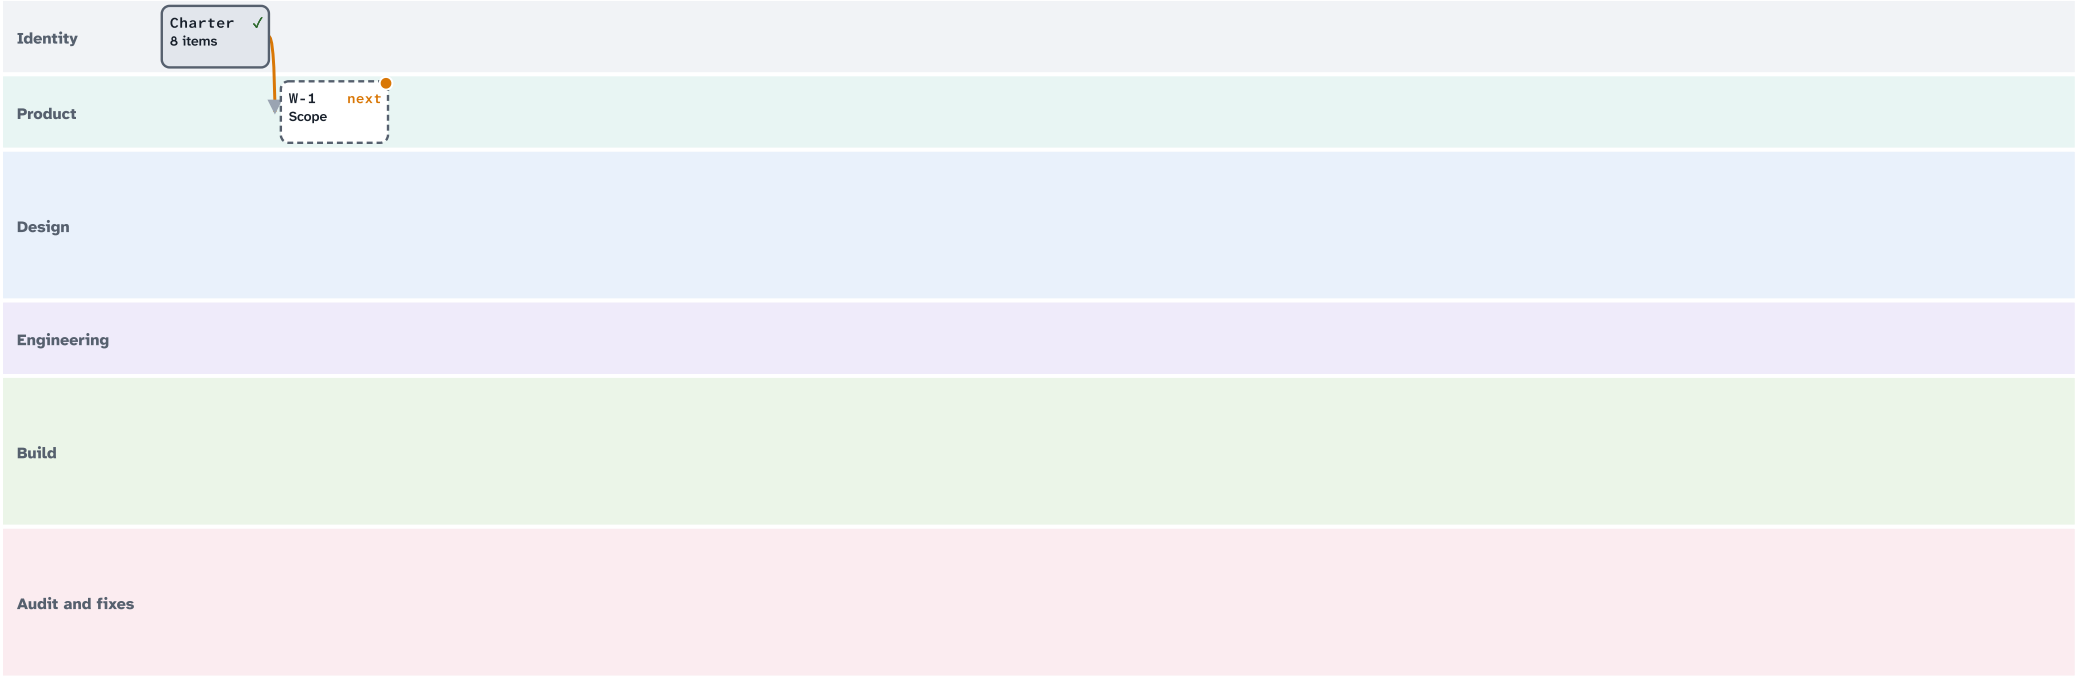

W-1 Scope, W-2 Hint rules, W-3 Look & layout, W-4 Wording, W-5 Architecture, W-6 Page shell, W-7 Grid + pad, W-8 Generator, W-9 Beginner helps, W-10 Hint button, W-11 Saved progress, W-12 Completion, W-13 How to play, W-14 Responsive + links

No workflow is on the map yet. Adaptation is planning. Planning uses AI calls but no build credits.

done ✓ running ▶ next to run born in this window Lines: direct dependencies (implied ones left out). Times: estimates from last night's run.

FRAME 2 OF 5 · MINUTE 3:00 TO 14:00 · MAP AT MINUTE 14:00

Adaptation finishes the plan. J2 registers all 14 workflows. The first one goes on the map.

What happens in this window

`3:00–5:00` Certainty: five gates. broken no · reaction no · facts yes · pattern yes · open choices yes → zone analyze.

`5:00–11:00` The judge scores every workflow on one question set: can it make its output? 2 revision rounds. 3 workflows split. Plan confidence 0.85.

`11:00–13:00` Adaptation proposes all 14 workflows, start to end, in dependency order. Priority funds them.

`13:00–14:00` The validator registers them as W-1 to W-14, in that order. Coordination picks W-1: it has no open dependency.

On the map now

1 done · 0 running · 1 next. Born in this window: W-1.

Registered, not on the map yet

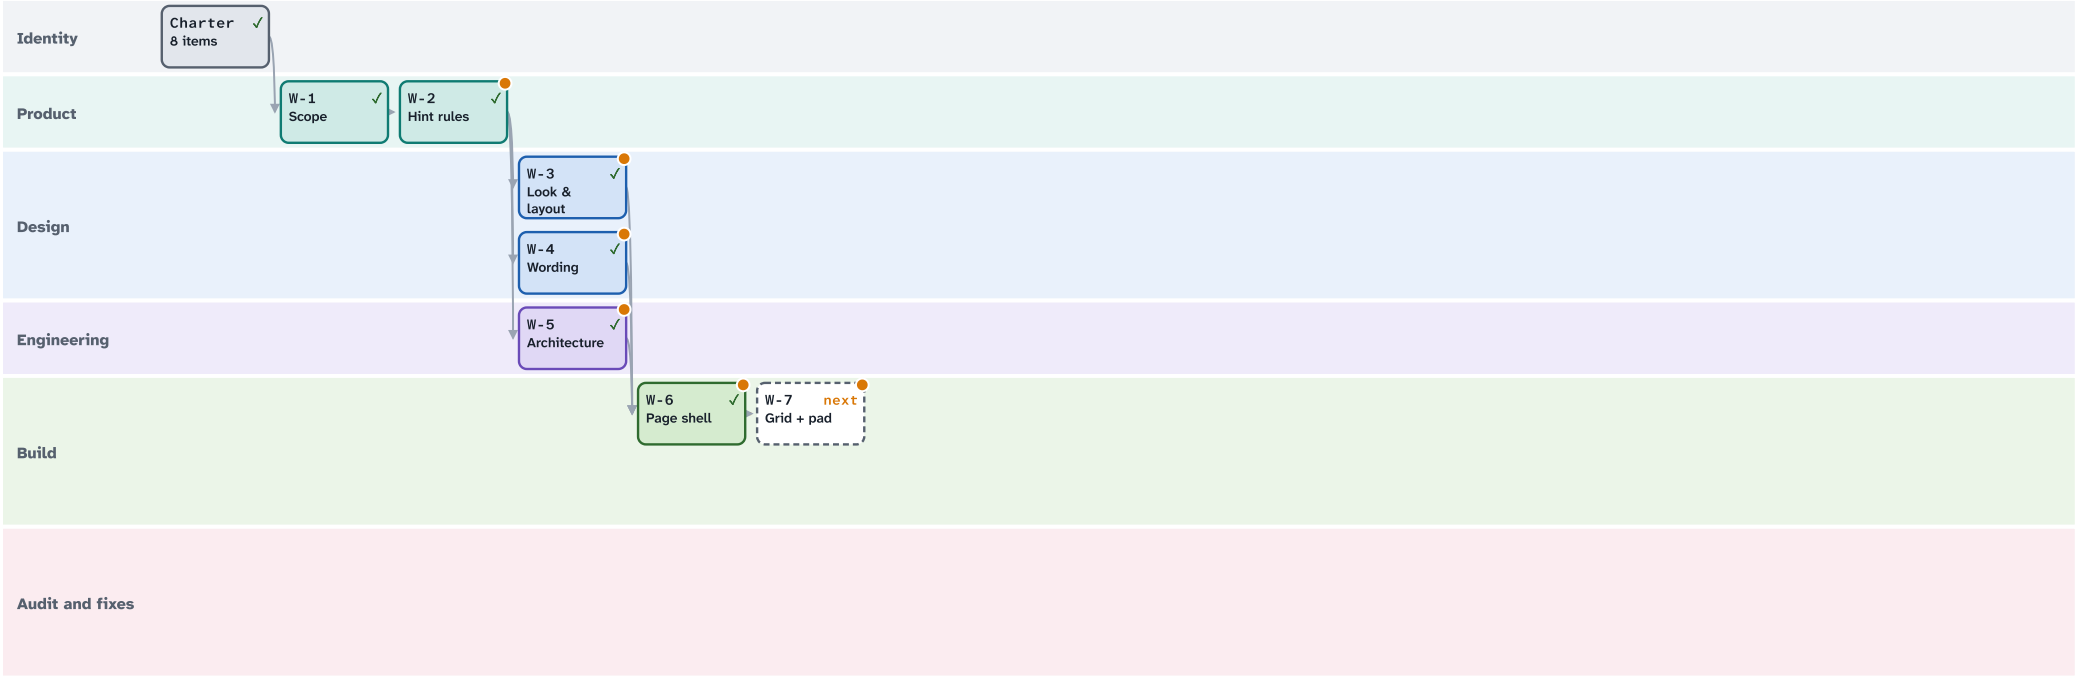

W-2 Hint rules, W-3 Look & layout, W-4 Wording, W-5 Architecture, W-6 Page shell, W-7 Grid + pad, W-8 Generator, W-9 Beginner helps, W-10 Hint button, W-11 Saved progress, W-12 Completion, W-13 How to play, W-14 Responsive + links

The full list exists in J2, but the map shows only the workflow that runs next.

done ✓ running ▶ next to run born in this window Lines: direct dependencies (implied ones left out). Times: estimates from last night's run.

FRAME 3 OF 5 · MINUTE 14:00 TO 22:18 · MAP AT MINUTE 22:18

Product, design and engineering workflows run. Their artifacts are ready for the build.

What happens in this window

14:00	W-1 Scope runs → scope.md.
15:20	W-2 Hint rules runs (reads W-1) → hint-rules.md.
16:40	W-3 Look and layout runs → style.json + layout.md.
18:00	W-4 Wording runs → wording.md.
19:20	W-5 Architecture runs → architecture.md.
20:50	W-6 Page shell runs (reads W-3, W-4, W-5) → first index.html.
22:20	W-7 Grid and number pad is next.

On the map now

7 done · 0 running · 1 next. Born in this window: W-2, W-3, W-4, W-5, W-6, W-7.

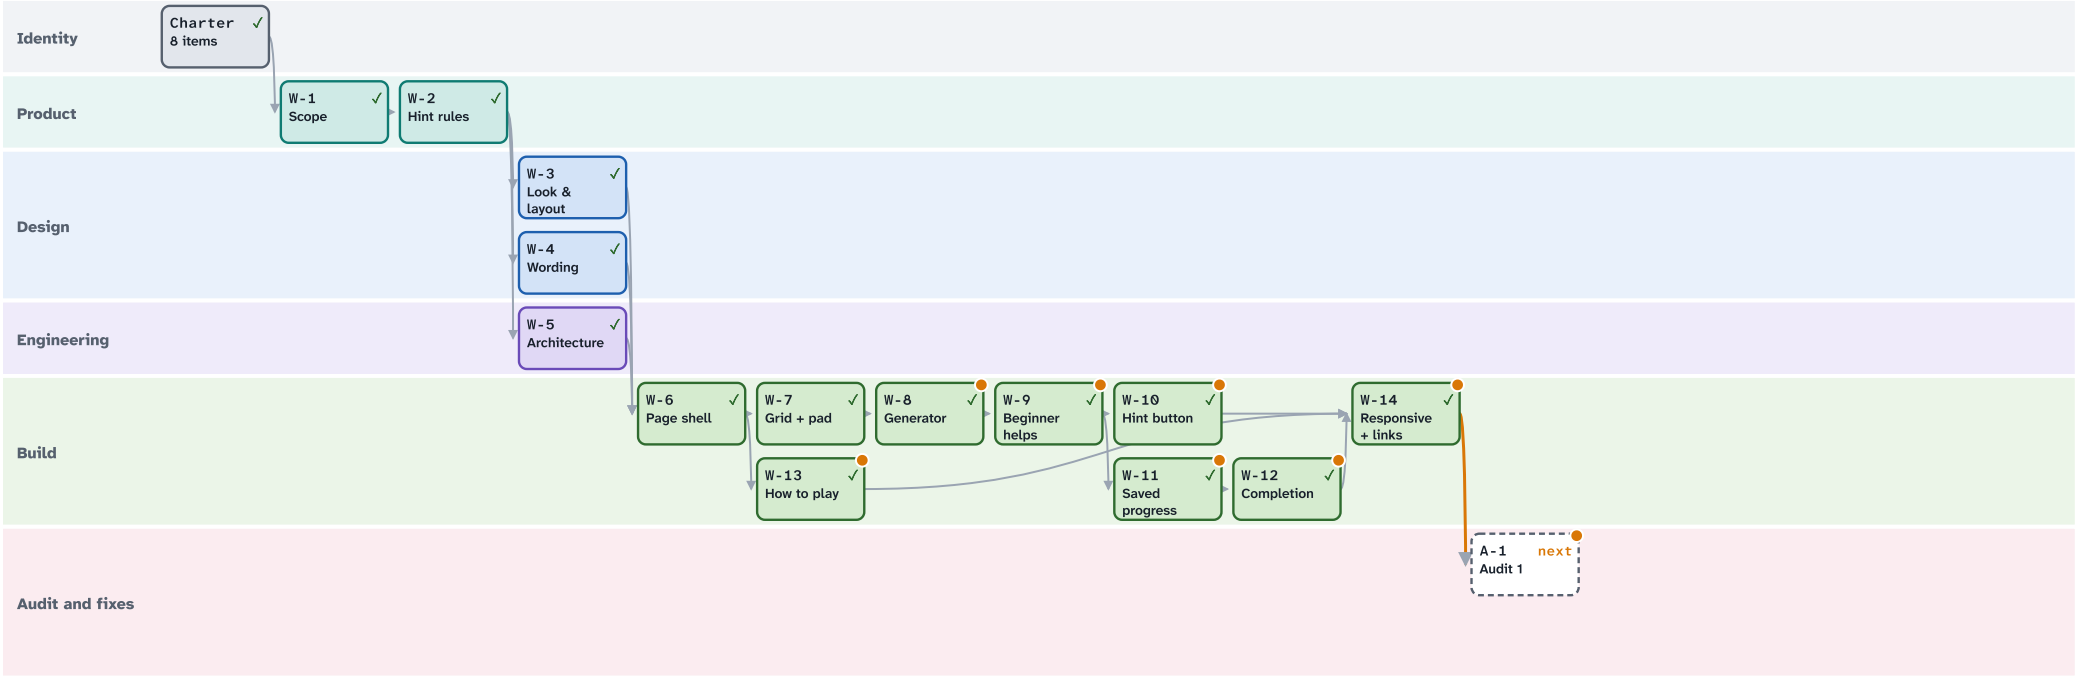

Registered, not on the map yet

W-8 Generator, W-9 Beginner helps, W-10 Hint button, W-11 Saved progress, W-12 Completion, W-13 How to play, W-14 Responsive + links

Each workflow goes on the map when it is the next to run. Its output is an artifact that the next workflows read.

done ✓ · running ▶ · next to run · born in this window · Lines: direct dependencies (implied ones left out). Times: estimates from last night's run.

The build workflows run one after another. Each one adds to index.html.

What happens in this window

22:20	W-7 Grid and number pad (item 2).
24:40	W-8 Generator and levels (item 3).
26:40	W-9 Beginner helps (part of item 4).
28:10	W-10 Hint button (item 4).
31:20	W-11 Saved progress and counters (item 6).
32:50	W-12 Completion (item 7).
34:00	W-13 How to play.
35:00	W-14 Responsive layout and links (item 8).
36:20	All 14 planned workflows are done. Audit 1 is next.

On the map now

15 done · 0 running · 1 next. Born in this window: W-8, W-9, W-10, W-11, W-12, W-13, W-14, A-1.

Registered, not on the map yet

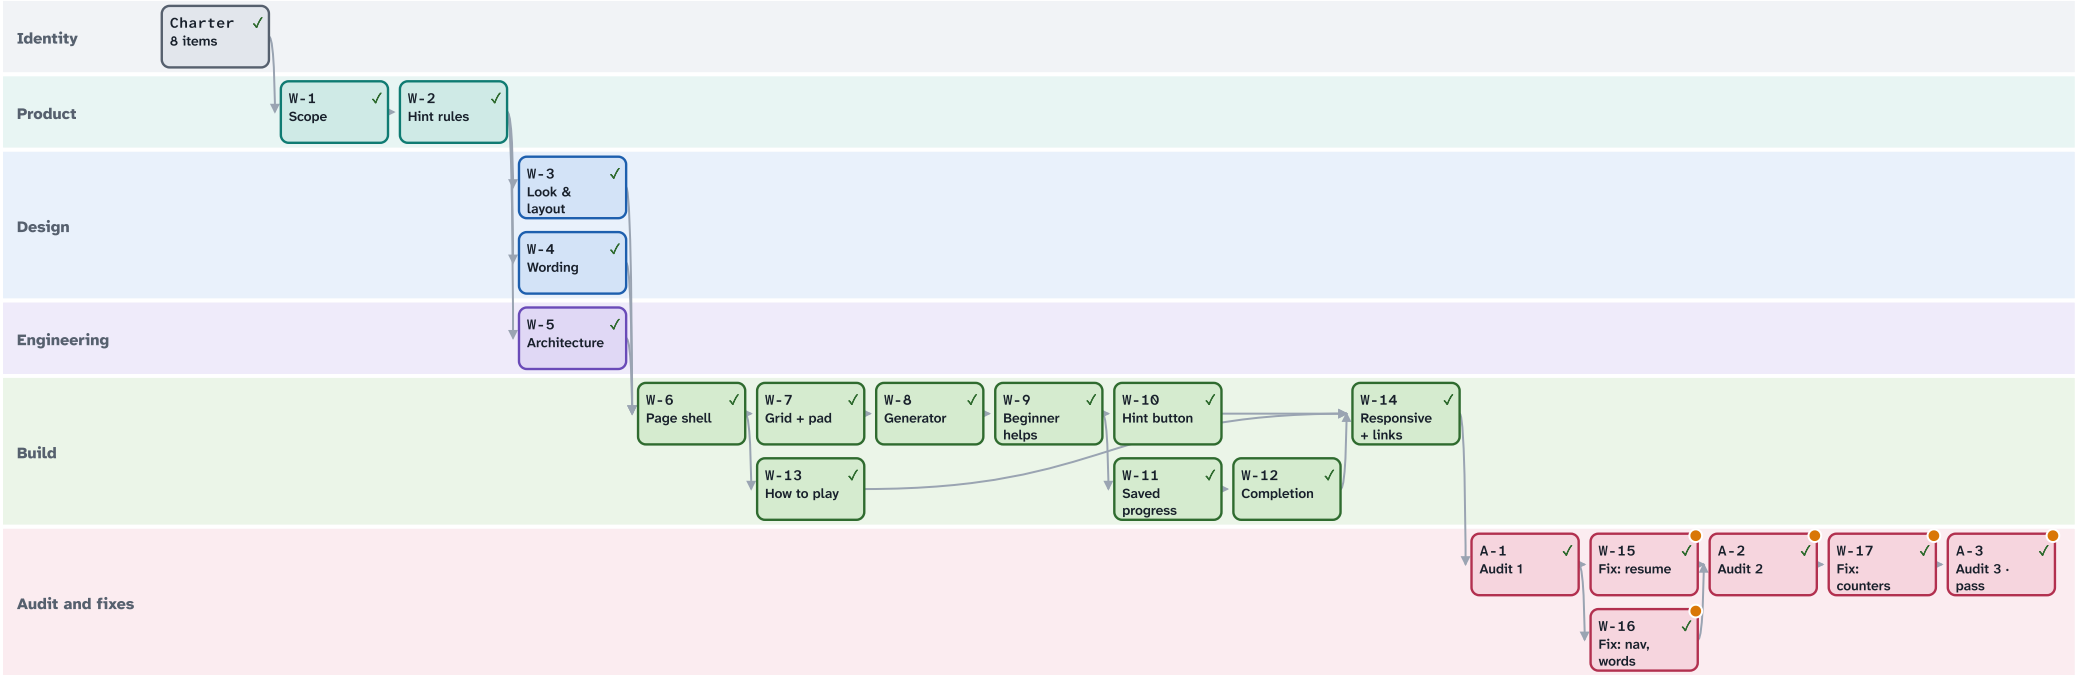

none

One workflow writes index.html at a time (write lock). Coordination runs the lowest ready id first.

done ✓ running ▶ next to run born in this window Lines: direct dependencies (implied ones left out). Times: estimates from last night's run.

FRAME 5 OF 5 · MINUTE 36:24 TO 44:00 · MAP AT MINUTE 44:00

Audit checks the site. Fix workflows are born from its findings. The run completes.

What happens in this window

36:20	Audit 1 checks site v14. Example findings: resume, nav and wording.
37:00–38:00	Adaptation proposes 2 fix workflows. They are born as W-15 and W-16.
38:00–40:10	W-15 and W-16 run.
40:10	Audit 2. Example finding: counters.
41:00–42:50	W-17 is born and runs.
42:50	Audit 3: every done-when item passes. The run is done.

On the map now

21 done · 0 running · 0 next. Born in this window: W-15, W-16, A-2, W-17, A-3.

Registered, not on the map yet

none

Fix workflows are normal workflows too. Their output revises the artifact of an earlier workflow.

done ✓ running ▶ next to run born in this window Lines: direct dependencies (implied ones left out). Times: estimates from last night's run.
